If you don't have the foobar2000 sources installed on your computer: See also: Foobar2000 Community Projects Roxio Channel Information - Rhythmbox Plugin a communication system, it is common practice to transmit digitized data through a communication channel. In transmitting digital data, system design decisions are often based upon an analysis of the signal characteristics of the channel through which the data is to be transmitted. The characteristics of such channels are commonly analyzed using a transmission line model. This line model is representative of the transmission characteristics of the channel between the transmitter and the receiver through which the data is being transmitted. The present invention relates to line models and specifically to a method of determining the characteristics of a transmission line. More specifically, the present invention concerns itself with the analysis of a multi-element transmission line system which includes a group of connected signal transmission lines. Transmission lines are commonly used in electronic systems to convey electronic signals between various devices. For instance, data transmitted via a transmission line in an electronic system is commonly provided to various electronic circuits including, among others, user circuits and processor circuits. The transmission line is in data communication with the electronic circuits. Typically, the data is transmitted at one end of the transmission line and is received at the opposite end. Various characteristics of the transmission line are used in designing the electronic system, such as a line impedance. When the transmission line is a coaxial line, the impedance is a function of the line length, diameter, and the dielectric constant of the coaxial line. The transmission line impedance is typically determined from the parallel connection of a series of resistors. There is a need in the art for an improved method of determining the characteristics of a multi-element transmission line. More specifically, there is a need for such a method that will provide for a
