Crack for Windows (64bit).[Brain  
tumor vascularized by perforating  
arteries: apropos of 5 cases]. The  
authors report five cases of cerebral  
tumours, which are characterized by  
a short history of rapid progression, a  
poor response to chemotherapy and  
by an almost exclusive

---

vascularization by perforating arteries. These findings suggest that these tumours derive from neuroectodermal tumours and that the most important histological parameter is the presence of frequent mitosis. The evolution of the disease during the follow-up and the good results obtained with a combination of surgery and irradiation, lead to the assumption that the term "non-glial malignant tumour" is not sufficiently precise.

**ADVANCED DUODUCTILE SILICON GANTRY FOR SUBSTRATE CONDUCTANCE MONITORING IN PEDIATRIC HEPATIC LIVER TRANSPLANTATION.** Novel substrates for detection of hepatic allograft rejection and monitoring of donor liver function were fabricated using metallised poly(3,4-ethylenedioxythiophene)-reduced graphene oxide (rGO) hybrid nanosheets, with the aim of improving the detection of noninvasive graft monitoring. The hybrid nanosheets were conformally coated on the outer surface of the state-of-the-art Duodential Donor Graft Intestinal Monitoring (DDGIM) sensor and used as a dual-electrode platform for the monitoring of donor liver function. The DDGIM sensor detects electrical impedance of the
