the effectiveness of multiscatter, for example, is the same, but with so much more freedom and visual effect. just as with v-ray, you can distribute the objects according to their assignment to the map, or to other objects. that is, you can choose how to draw the object or map. you can also use one of the following methods to distribute the objects in the scene: - the objects can be distributed by the size of the map or by the bitmap size or to allocate space based on the size of the bitmap. for example, there are two objects with one map, one of them has more space than the other, so the objects will be distributed depending on the space allocated. - the objects can be distributed according to the assignment to the map or by the size of the map or to allocate space based on the size of the bitmap. - the objects can be distributed in a random way. - the objects can be distributed in a random way. the other great feature of multiscatter is the ability to

upload and download. for example, if you want to change the position of a scene and you have a file with polygons of the scene, you can upload this file and position the new scene. the same is true for arn, mental ray, corona, octane, maxwell, fstormrender and other renderman-based render engines, such as v-ray, arnold, and others. of course, you can use multiscatter to distribute objects from the preset lists of maps, or to allocate space based on the size of the map or to distribute objects based on the size of the map or to allocate space based on the size of the bitmap. multiscatter can be used for game engines and render engines. multiscatter is a plug-in for 3ds max, based on vrayscatter technology designed to work not only with v-ray but also with arnold, mental ray, corona, octane, maxwell, fstormrender (others have can be added using our sdk)
