You can share any cloud record, and downloads to iPad are handled by iCloud. Databases are synchronized between desktop and mobile versions of Photoshop, and single photos are automatically updated. This makes it easier to track what editing changes are applied to similar photos. With regards to accessibility, the team introduced a wide range of adjustments. For example, batch processing is now included and previewed before export, while labels, keywording, and hierarchy support were expanded. The new Camera Raw plugin includes a new “Compose” mode. A tool is being easily edited on the fly, and adjustments such as exposure and highlights are handled more intelligently. The team also increased the zoom and pan speed of the brush tools.
