

The sample library and sounds produced with this synth are just incredible. The interface is the perfect place to start for one and all. The interface is a bit confusing, but if you are used to dealing with subtractive synthesizers this is almost a given. This synth creates sounds that are in the high-end of orchestral sounds, especially if you compare it to the other synths in this price range. The filters are very cool and the sound is very clean. There is a lot of room for sound design and experimentation, and once you get the hang of things it is extremely easy to produce the sounds you have in mind. The most important thing to note about this synth is that it does not have a digital sound, the final product is a professional sound. I highly recommend this synth, for anyone who wants a very unique synth experience, for all experienced users and those who are willing to learn and work a bit to get the best results out of this synth. I would even say that anyone buying this synth is getting a great instrument for the money. The sample library and sounds produced with this synth are just incredible.
