What's New in the?

Extension Changer lets you change the extension of many different files. No need to install the app on your hard drive. Whenever you are on the road, just copy the files to the location of your choice and run the program. The process takes place right on your USB flash drive or portable hard drive. You need to do absolutely nothing. The software automatically creates a folder to store the processed files. When using multiple files, you can process them one by one or in parallel. If your system is not connected to the Internet, the app is able to download the new extensions of the files that are stored on the hard drive. The program also provides a direct link to this information and a status report to show you how many files have been processed and the size of the file after the operation. With this tool, you are not stuck with the extensions of the files you have - the software can also change the extension of every single file on your hard drive to new formats. For instance, you can turn.mp3 files into.zip, or.avi files into.mp4. This way you can have all your files on your portable devices without suffering from the non-suitability of the format. You can also convert the content of your documents into other formats - PDF, DOC, RTF or TXT. It will save you a lot of time and effort, and will allow you to use whatever portable device you wish. You can also save the file as a new format in any location you prefer. The whole process is simple and fast. You simply select the files you want to work with and right click on them. You have two options - 'Open' and 'Copy'. After selecting an extension, you can either click the button 'Change' or type a new one in the text box to specify. You can also make a second choice by using the right arrow button. If you are changing the extension of multiple files, you can select the entire folder with the left arrow button. With this method, the files will be processed one by one. If you want to process multiple files at the same time, you have to type the names of the files in the text box on the main window. After processing the files, the app will display a message and inform you of the progress. If all the files have been successfully processed, the program will continue to the next step and will look for the folder named 'Processed' in the same location as the file was originally stored. There, you will be able to see all the files which were processed. Extension Changer is a lightweight and portable program which can turn the extensions of your files into something else, as the name implies. Since this is a portable application, installing Extension Changer is not necessary.
