Unlike other cloud services, including Lightroom and Google Docs, the cloud is not intended as a replacement for your local data storage. It also only stores actions that can be executed on images. Local data storage is still the best for iPhoto library and favorites data. That is, it is for storing filters and actions that you have set in your library to apply to specific images. Finding these filters is easy and works great with the visual search feature in iPhoto. There are inherent risks when connecting to the cloud. For example, a security breach or misconfiguration could compromise your data. So, it is essential that users take the time to assess their data security needs and implement appropriate security measures. First, let's discuss the good things inside the box. New users can install the update via the standard Windows Update. The top-level download, however, is a folder with the app's name, a bitmap of the old desktop, and a script file that will install the new version. (Be sure to choose 32- or 64-bit according to your needs—unless you want to be stuck with a 32-bit version of Photoshop. This is yet another sore point among older users, who—along with Windows fans—feel that sticking with 32-bit versions of Windows is unnecessarily limiting. Companies like Microsoft, Apple, and Google all make their own versions of 64-bit Windows, yet most of their software is still 32-bit—meaning anyone using a system with even 4 GB of RAM has to make do with 32-bit software alone.)
