Q: I am learning mathematical modelling / simulation using C++. What language(s) do you recommend I use? I am learning mathematical modelling / simulation using C++. I am aware of the C++11 threading model with the class-based inheritance model. But I have no idea which language to learn for modeling. Do you recommend learning it from the beginning or from some other language like Java? Should I learn DSP with C++ or should I learn a whole new language? I am a beginner so any help will be very appreciated.

A: I agree with the comment, you should start with C++ for modeling. Can you elaborate why you would prefer a new language over C++? In most cases the answer is "because its different and you want to learn that". In your case: "I want to learn about DSP" - then I think your first language should be Java, C#, Python or C++. Don't know them yet? Don't worry, C++ can be used for a lot of interesting DSP topics as well as in simulation and other parts of science. While I prefer learning everything from the beginning, that might be quite a challenge for your first course. To learn C++, the book of Peter Van Roy recommends you learn the

basics in C first. So: Learn C from the beginning (avoid languages like C#, Java, Python,...) Learn C++ (the basics might be covered in other books, but a good, extensive C++ book is "C++ for the Impatient") Learn C again (when learning C++, the C stuff is much easier) : $\text{const auto r} = \{R1, R2, R3\};$
