In the beginning of the time, we only have black color to use as the background of our document e.g. the original image. However, when we want to change background color, we need to use the other color as the background for our document. For example, we want to use a white color as background for our document. We can easily get the result using the Photoshop tool, it is called "Colors & Comps". Overall, I found that going into the GoldCore USB Portfolio product test videos was just the right starting point. As a photographer, it was a very strange experience to see the camera in the operating mode where I prefer to use it anyway. Having owned it for a couple of weeks now, I must say that I understand what Canon ambassadors are talking about. As mentioned above, it is with some slight disappointment that I came to the conclusion that Fujifilm X-Trans RAW sensor files are not ready for prime time. I have tested the software for both Canon and Nikon camera RAW files in *.CR2 format, and the integrated converter performs a very good job. In fact, the deliverables are skin-friendly with great tonal smoothness. Still, there are visible cross-processing artifacts on the Fujifilm files and I have to say that I am not impressed overall. The converter also leaves out several RAW features such as selection handles, masking (if required) or even image rotation. Of course, the big "upgrade" that was mentioned many times for 2014 is the introduction of the Creative Cloud which has just been updated for 2014 too. You can subscribe to a yearly or monthly plan and access the ever-increasing improvements in what is already a very robust and feature-rich program, simply using Adobe's website. To get a feel for the new benefits, we again head off to Photoshop.com and compare the host of new features that are available:
