Category: Musician's
assistant programs Q:
How many ways are
there to choose 3
different positive
numbers such that their
sum is 30? So I know
how to solve this
problem for when the
sum is 30 or lower,
with the combination
formula. If I am

adding numbers that are ≥ 30 , what would I do with the formula?

Would I add

$30 \cdot 26 \cdot 25$? A:

Consider the 3

numbers each in their own box, where the

sum of the three boxes

is $\$30$. Put all of the

non-negative numbers

in one box, the $\$1$'s in

another, the \$2's\$ in another and the \$3's\$ in another. The total number of ways is the product of the number of ways to get each element into the box by the number of boxes, which is

$$\binom{3+5+7}{5} = \binom{30}{5} = 15 \binom{15}{5}.$$

Q: Class

with javascript object syntax What's the difference between `var module_1 = { init: function() { return false; } };` and `var module_1 = function() { return false; };`

Both works just fine. I don't see any difference. A: The first one is anonymous

function, where the function inside does not has name. For more info: The second one is normal named function. A: There is a difference: An anonymous function does not have a name and can not be called:

```
var module_1 = { init: function() { // nothing
```

here // But it can be
called like this:
module_1.init(); // it
also can receive
parameters
module_1.init(
